

NANO
wear-resistant grade for
hard milling and finishing

NANO ▲ ○ ▼ + ▼▼▼

- + Extremely wear resistant
- + Highspeed machining, V_c 200-400m/min (RDHW d5, d6, d7, d8)
- + Very sharp cutting edge, low cutting force (RDHW d5, d6, d7, d8)
- + Hardmilling with interrupted cut
- + Roughing and finishing
- + Welded material milling

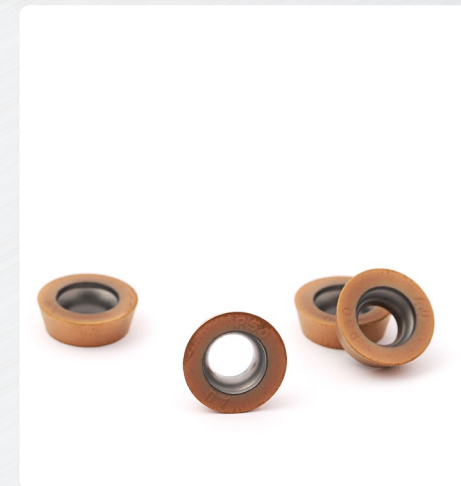

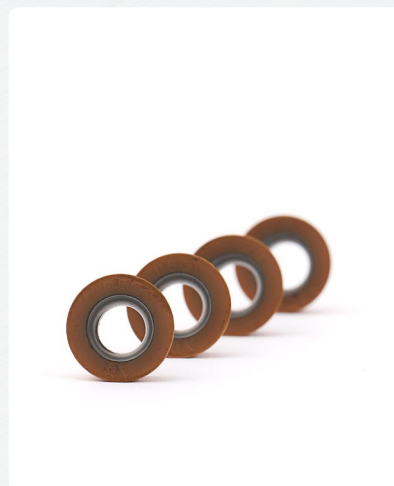

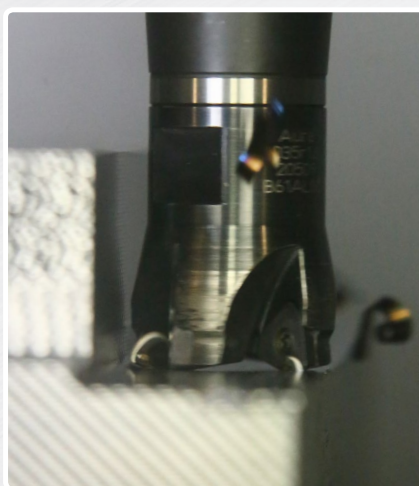

The **NANO** carbide grade is developed for roughing and finishing all steels also tempered and hardened. The **NANO** carbide grade is extremely wear resistant, highly ductile and unique for process reliability for machining hardened tool steel. Stability in finishing par excellence. Also in non-corrosive tool steel such as 1.2316, 1.2085, 1.2083 - high lifetimes can be achieved. Clean hot working steels used in the aluminium die cast industry such as Q10, TQ1, HP1, DIEVAR, Formesta2000 are also machined with the **NANO** carbide grade for finishing application as well as machining the rest material.

P50
the first choice
for soft roughing

+

Unhardened steel and toolsteel

+

Extremely tough, for interrupted cut

+

Very universally applicable

+

Dry and wet machining

+

Reduced cutting speeds at high feeds per tooth

*"Don't worry about your crazy programs
- take the process reliable P50!"*

AURA® Frästechnik GmbH

Extremely tough substrate for difficult operating conditions. **P50** offers process reliability even under adverse operating conditions. It is designed to withstand strong mechanical loads wich for example can be caused by interrupted cuts or vibrations. Due to its high toughness and breaking strength, the grade is suitable for unmanned roughing under poor machining conditions.

The **P50** substrate ensures reliable machining under unfavorable conditions such as:

- Heavily interrupted cuts
- Predrilled mould plates
- Large overhangs
- Instable clamping
- Thin-walled webs

The areas of application include tool steels to 35 HRC, stainless steels with chromium and nickel alloy components up to duplex steels. In addition, the **P50** substrate is predestined for machining stellite and weld metal.
